

<b>ISO Central Secretariat editorial comments</b> <b>Commentaires rédactionnels du Secrétariat central de l'ISO</b>	
<b>ISO/FDIS 15649</b>	<b>ISO/TC 67/SC 6</b>

In preparing this text for the FDIS vote, the following questions arose:

1) In **4.2.1 Owner** the last sentence is "The owner shall specify how far towards pipelines, if present, the requirements of this International Standard shall apply."

I did not understand this sentence, as the entire document deals with requirements for pipelines. What does "how far towards" mean?? Is a pipeline different from piping or piping system? If so, perhaps it needs a separate definition. I request this sentence be rewritten in a clearer manner. Please indicate changes on the proof you return to the Central Secretariat after the FDIS vote.

2) In **4.8.3.6**, it states "...the maximum temperature range...shall not exceed 35 K..." Do you really mean here a range of 35 K (e.g. from 20 K to 55 K) or do you mean a maximum temperature of 35 K (not a range)? Please make any necessary correction on your proof.

Thank you for your kind cooperation.
